

# THE MONADNOCK

of the

Clark University Geographical Society

*“ . . . geography is concerned to provide accurate, orderly, and rational description and interpretation of the variable character of the earth surface. . . . In contrast to the sciences concerned with particular categories of phenomena, geography is concerned with features not in themselves but as elements in areal integration.”*

RICHARD HARTSHORNE, 1959

We of The Monadnock extend greetings to the alumni of the Clark University Graduate School of Geography around the world. It is hoped that this issue contains news and information which will be of interest to all.

In the past, The Monadnock has attempted to keep you informed as to the whereabouts and activities of others. We have continued this tradition and have reproduced the information you sent with as little editing as possible. Beginning with the Spring issue, the number of copies of The Monadnock distributed to CUGS will exceed six hundred.

May we take this opportunity to wish each of you happiness in personal affairs and success in professional projects.

The Monadnock is regularly published twice a year in December and May, by the Clark University Geographical Society, Worcester, Massachusetts.

Dr. Samuel Van Valkenburg will leave for Europe in early summer to continue investigations of land use. On this trip his study will be concentrated in Austria. Dr. Van will attend the Stockholm meetings of the International Geographical Union before returning to guide the Graduate School of Geography through another year.

In June and July, Dr. Raymond E. Murphy will teach at the University of Nebraska. He plans to depart for Europe in late July and, after the I.G.U. meetings present a paper at an urban symposium at Lund.

Dr. Henry J. Warman plans to teach weather and climate at the Clark University intersession then move on to the University of Colorado's Workshop in Geography. Later in the summer he will fly to Stockholm. The trip back will probably be via the polar route to Los Angeles, then by car to Worcester.

Dr. Richard J. Lougee was forced to give up his classroom teaching early in the new year because of cancer. Hospitalized for many weeks, his illness has left him undaunted. Students, even those new to Clark, will long remember his clear presentation of complex geomorphic and physiographic phenomena. No one will forget the Christmas party where he

was presented with the lyle-detector machine. Unfortunately, the presentation of his glacial theories at the Stockholm meetings had to be cancelled. The Monadnock and Workroom gang wish this kind man and noble scholar our best wishes for better health.

The visiting Professor this semester is Dr. Erwin Raisz, who is teaching aerial photo and map interpretation as well as physiography. Many of us have marveled while watching Dr. Raisz produce landform diagrams and become frustrated at our own attempts.

Dr. Hans Carol will leave for Switzerland and, in August, visit Stockholm. Later in the summer he will bring his family to the U.S. where he has accepted a position at the University of Cincinnati. The CUGS are fortunate to have had the opportunity to study under the guidance of excellent geographers, but not all can remain with us for more than a year or two. Workroom members of the past two years will remember Dr. Carol as "master" of our studies in Field Techniques, Africa, Land Use and the APLU (agrophysical land unit). We wish him the best in his new academic venture and hope that his stay in this country may be long and pleasant.

Mr. Guy Burnham will offer cartography again this summer for those eager beavers who want to keep cool.

## ALUMNI ACTIVITIES

Of over 500 questionnaires sent out last Fall, about 170 were returned. Included in the response were generous contributions so necessary for the publication of this and the December issue.

Inspection of the following pages will show that teaching in schools, colleges and universities heads the list of CUGS occupations, with 100 members. The second largest group, with 23, is workers in government service, but the number in planning and related fields now totals 17 and is rapidly increasing.

We have indicated the year of graduation, present professional position and address of those members returning questionnaires. Within the brackets are home, not professional, addresses. An asterisk (\*) will be found beside the names of CUGS who have indicated that they plan to attend the International Geographical Union meetings in Stockholm this summer.

## VISITING LECTURERS

The first guest lecturer of the 1959-60 academic year was Professor George B. Cressey (Ph.D.'31) of Syracuse University who visited the School for several days in early December. Three well illustrated lectures were offered, "How Strong is Russia?", "China's Prospect-People, Land and Resources," and "Land and Life in Southwest Asia."

Unfortunately, the visitors following Dr. Cressey could not stay with us longer than an afternoon, but their contributions were appreciated by the staff and students. Dr. Franklin C. Erickson (Ph.D.'35), recently promoted to Associate Dean of the College of Liberal Arts at Boston University, provided an interesting lecture on permanent and resultant geomorphic features in the Alaska coastal plain. The third lecturer, Dr. Wallace W. Atwood, Jr. (Ph.D.'30), Director of the Office of International Relations, National Academy of Science, discussed the function and workings of this organization and the role of the geographer as a co-ordinator. Professor George F. Carter of John Hopkins University presented an illustrated lecture of his work tracing cultural diffusion through linguistic analysis, especially pictographic study. Congratulations are in order to the ladies of the Workroom for tea-time delicacies.

## NEW CUGS

Stephen O. Wilson (Dartmouth, B.A., 1959) is new to The Monadnock but already an old hand of the Workroom. Steve has a well developed interest in polar lands and has spent some time in Antarctica as a naval officer. His immediate interests are continued study of this little-known area.

Abdul Wahab Al Dabbagh (Cairo University, B.A., 1945, Birmingham University, England, M.A., 1949) has come to us from a professorship at the College of Education, Baghdad University, Iraq. In his Ph.D. residence year, Abdul's interests are political, economic and cultural geography.

Lehman L. Henry (University of Hawaii, B.A., 1952, M.A., 1957) joined the Workroom gang in February. His major geographic interests are the Pacific Basin area, Western Europe and the production of geographic films. After Clark, "Bud" hopes to be a geographer for the government.

Harley E. Scott (University of Buffalo, B.A., 1960) comes from Lancaster, New York and has begun his M.A. residence. On graduation, Scotty would like a civil service job where he could study the economic geography of the U.S.S.R.
